BUILDING THE FUTURE OF CANCER CARE IN ELLIOT LAKE

Quality healthcare from quality people

St. Joseph's General Hospital Elliot Lake has completed a major pharmacy modernization project, creating a state-of-the-art sterile compounding facility that will support safe oncology care for years to come.

Faced with evolving national compounding standards, the hospital chose to invest in modernization rather than scale back services. The result is a fully compliant facility featuring dedicated hazardous and non-hazardous cleanrooms, advanced engineering systems, and enhanced safety measures for both patients and healthcare professionals.

"This project bridged industry expertise with operational reality, creating a facility that meets both regulatory requirements and the practical demands of daily pharmacy operations."

– Rebecca Lynch, RPhT, Regional Manager, NTS Pharmacy Technicians

PROJECT HIGHLIGHTS

 Modern Sterile Compounding Facility

Purpose-built space designed to meet today's regulatory requirements.

 Enhanced Safety

Advanced engineering controls reduce exposure risks while supporting the highest standards of patient care.

 Powered by Collaboration

Hospital leadership, pharmacy teams, architects, engineers, and community partners worked together to bring the vision to life.

 Community Investment

Fundraising efforts and local support helped make this critical healthcare upgrade possible.

 Care Close to Home

Patients can continue receiving oncology treatments locally, reducing travel and improving access to specialized care.
